

HTML + CSS Task: Pricing Table

Question:

Design a simple **Pricing Table webpage** with **3 columns: Basic, Standard, Premium**.

Specifications:

1. Structure (HTML)

- Use a container for the whole table.
- Inside the container, create 3 pricing cards (Basic, Standard, Premium).
- Each card must include: a heading (plan name), a price (e.g., \$9/month, \$19/month, \$29/month), a list of at least 3 features (use and), and a 'Sign Up' button.

2. Styling (CSS)

- Each column must have a border, padding, and rounded corners, aligned side by side using Flexbox or CSS Grid.
- The Standard plan should be highlighted with a different background color (e.g., light blue).
- Buttons should have background color (blue), white text, and hover effect (dark blue background).
- Use a Google Font (e.g., Poppins or Roboto).
- Add spacing (margin + padding) so the table looks clean.

3. Responsiveness

- On desktop → The 3 columns should appear side by side.
- On mobile → The columns should stack vertically.

4. Bonus (Optional for Extra Marks)

- Add a simple hover effect on the Standard plan card (e.g., slight scale-up).
- Add a box-shadow to give the cards a modern look.
